*Response to RCE and Amendment*

Applicant's arguments have been fully considered but they are not persuasive.

Claims 4-5, 9-14 and 18-25 remain withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 7. Claims 9 and 18 were not found in the description of the embodiment of Figure 1 (i.e. the elected species).

*Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2 and 26 are rejected under 35 U.S.C. § 102(b) as being anticipated by Ogushi et al. See at least figure 9.

Claim 2 is rejected under 35 U.S.C. § 102(b) as being anticipated by Moore, Jr. The patent of Moore, Jr. in figure 18 discloses applicant's claimed invention. Item 236 is read as a reservoir since it contains liquid. As stated in *Ex parte Masham*, "a recitation with respect to the material intended to be worked upon by a claimed apparatus does not impose any structural limitations upon the claimed apparatus which differentiates it from a prior art apparatus satisfying the structural limitations of that claimed."

Art Unit: 3743

*Allowable Subject Matter*

Claims 6-7, 15-16 and 27-31 are allowed.

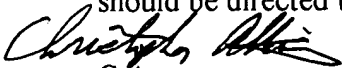

*Response to Arguments*

Applicant's concerns directed toward Ogushi et al. are not found persuasive. In figure 9 of Ogushi et al., item "111" is read as the liquid reservoir rank, item "1" is the evaporator containing a reservoir of liquid which is contained within the porous material "114", item "115" is read as and functions as a liquid supply port/conduit, item "116" is read as and functions as a vapor ejection port and unnumbered conduit which attaches to the evaporator (1) from the left side or the unnumbered conduit above item "118" as illustrated in figure 9 is read as a liquid ejection port. Since the device of Ogushi et al. meets applicant's claimed device and since applicant has failed to state any difference between the claimed limitations and the operation of Ogushi et al., claim 26 is still considered to be met by Ogushi et al.

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher Atkinson whose telephone number is (703) 308-2603.
